Sony to Release **α7R II** Firmware Adding Uncompressed 14-Bit RAW on October 19th

Sony will release a firmware update on October 19th, 2015 that adds uncompressed 14-Bit RAW image capture to the acclaimed [α7R II](#) full frame interchangeable lens camera.

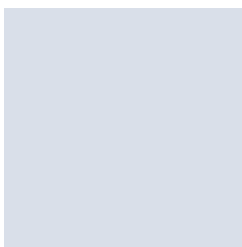

The new firmware, version 2.0, will be available for download through Sony's e-support site <http://www.esupport.sony.com> on the product page for model "ILCE-7RM2".

In addition to uncompressed RAW capture, which will become a selectable feature (uncompressed/compressed RAW) within the menu system for updated cameras, the firmware also adds the ability for the **α7R II** to output video via HDMI during use of the Remote Camera Control software, that enables remote capture from a connected computer.

The **α7R II** is compatible with Sony's growing line-up of **α**-mount lenses, which now totals 64 different models including 13 native 'FE' full frame lenses. In 2016, Sony aims to build the native FE lens line-up to over 20 different models.

Sony Corporation is a leading manufacturer of audio, video, game, communications, key device and information technology products for the consumer and professional markets. With its music, pictures, computer entertainment and online businesses, Sony is uniquely positioned to be the leading electronics and entertainment company in the world. Sony recorded consolidated annual sales of approximately \$68 billion for the fiscal year ended March 31, 2015. Sony Global Web Site: <http://www.sony.net/>
